FINANCIAL SECURITY OPERATIONS ASSESSMENT

Microsoft 365 and Azure

Our Financial and Security Operations (FinSecOps) Assessment for Microsoft 365 (M365) and Azure Cloud (Azure) fortifies an organization's digital ecosystem by addressing key security considerations across various dimensions.

GoSecure identifies and rectifies potential vulnerabilities, misconfigurations, and weaknesses within the assessed environments to mitigate the risk of exploitation by malicious actors. In doing so, priority actions to enhance and strengthen the overall security posture of an organization are highlighted, all while investigating cost reduction opportunities.

Our experts will design an action plan based on your organization's needs, objectives and business context. Leveraging the Microsoft Security Stack at your disposal, the end goal is to help you bridge your security gaps without increasing your IT security budget.

Achieve More with Less

Both M365 and Azure environments come with an arsenal of security features that, once configured, deployed and activated properly, offer reliability, trust, compliance and protection. GoSecure's certified Security Operations team will perform an in-depth analysis of your Microsoft ecosystem to uncover areas of improvement for you to fully benefit from your current security investments.

Our assessment extends even further to look at potential savings involving licensing optimization, resource consumption reduction, performance increase, removal of duplicate solutions, etc. Our FinSecOps Assessment for M365 and Azure is designed to increase your security and budget effectiveness and efficiency, helping you achieve more with less.
